

Nexus Meets DRS Software transcript

0:09

My name is Martin.

0:10

I am the Lead Software Engineer at DRS Software.

0:15

My background is in chemical engineering.

0:17

Actually, I wrote a master's thesis in applying machine learning to chemical processes.

0:23

But alongside that, I've written software for 15 years, first few years for fun.

0:29

The last 12 years or so has been professionally.

0:36

So DRS Software is a specialist software consulting company.

0:40

We focus on using advanced web technologies to solve the most complex problems in application development and software modernization.

0:50

Specifically, we're experts in a technology called Web Assembly, which is a game changing technology that sort of supercharges what you can do in web applications specifically.

1:01

So we've used this technology to very significantly accelerate software modernization efforts and to develop high performance web applications where Web Assembly delivers the speed that's required for demanding workloads right over the next year.

1:21

We are continuing to look for businesses and help them realise the value of web assembly and integrate it into the applications.

1:30

We're specifically looking to increase our footprint in the UK.

1:33

We've had a lot of global clienteles, but not very many within the UK specifically.

1:41

Yeah, we are looking to collaborate with organisations that are either considering or have started software modernization efforts.

1:50

We're particularly keen to see how Assembly might be able to help them along that journey.

1:58

We are also interested in working with any organisations that are building advanced web applications, exploring advanced web technologies.

2:07

We're always keen to share notes with others who are pushing the limits of the browser and what it can do.
